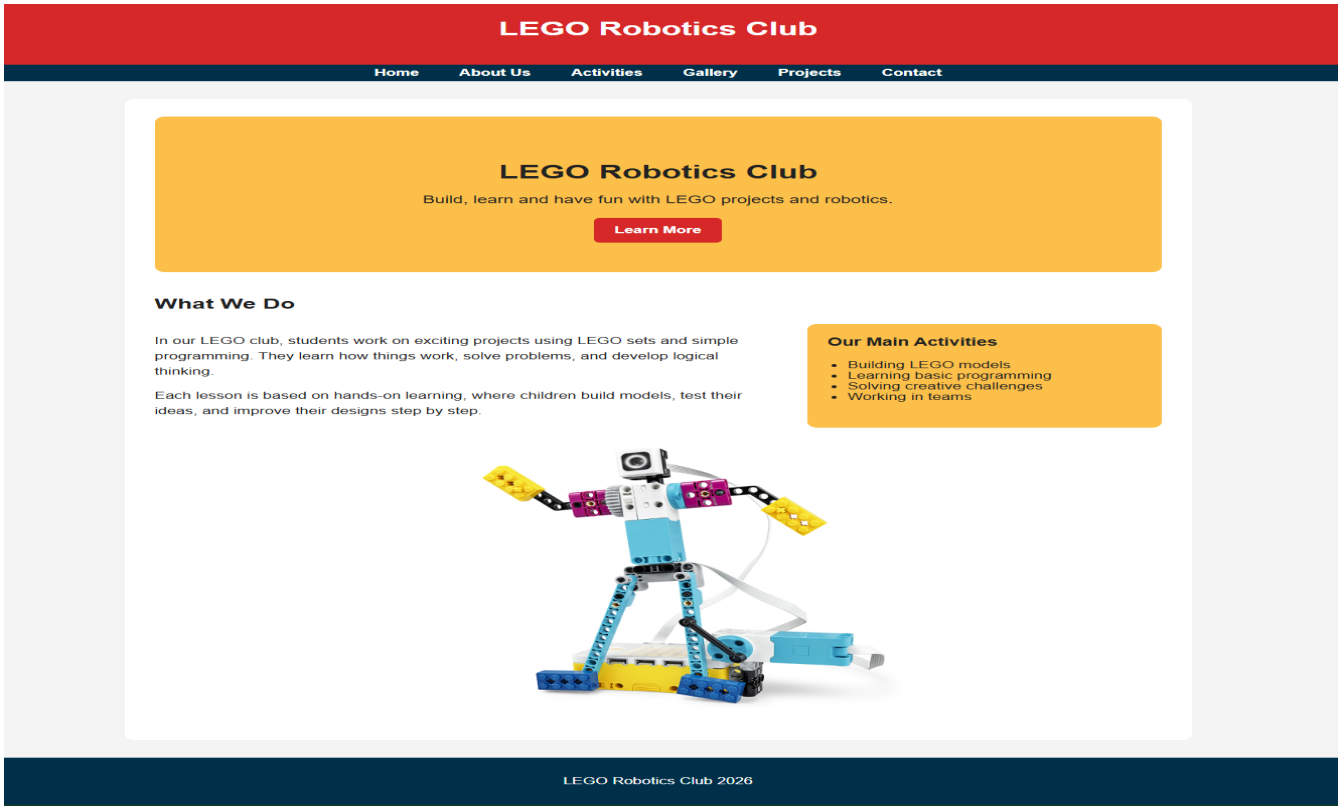
LEGO Robotics Club Website Design

This document presents the design of a simple website created for a LEGO Robotics Club. The goal of the website is to introduce the club, its activities, and allow users to contact or join the club.

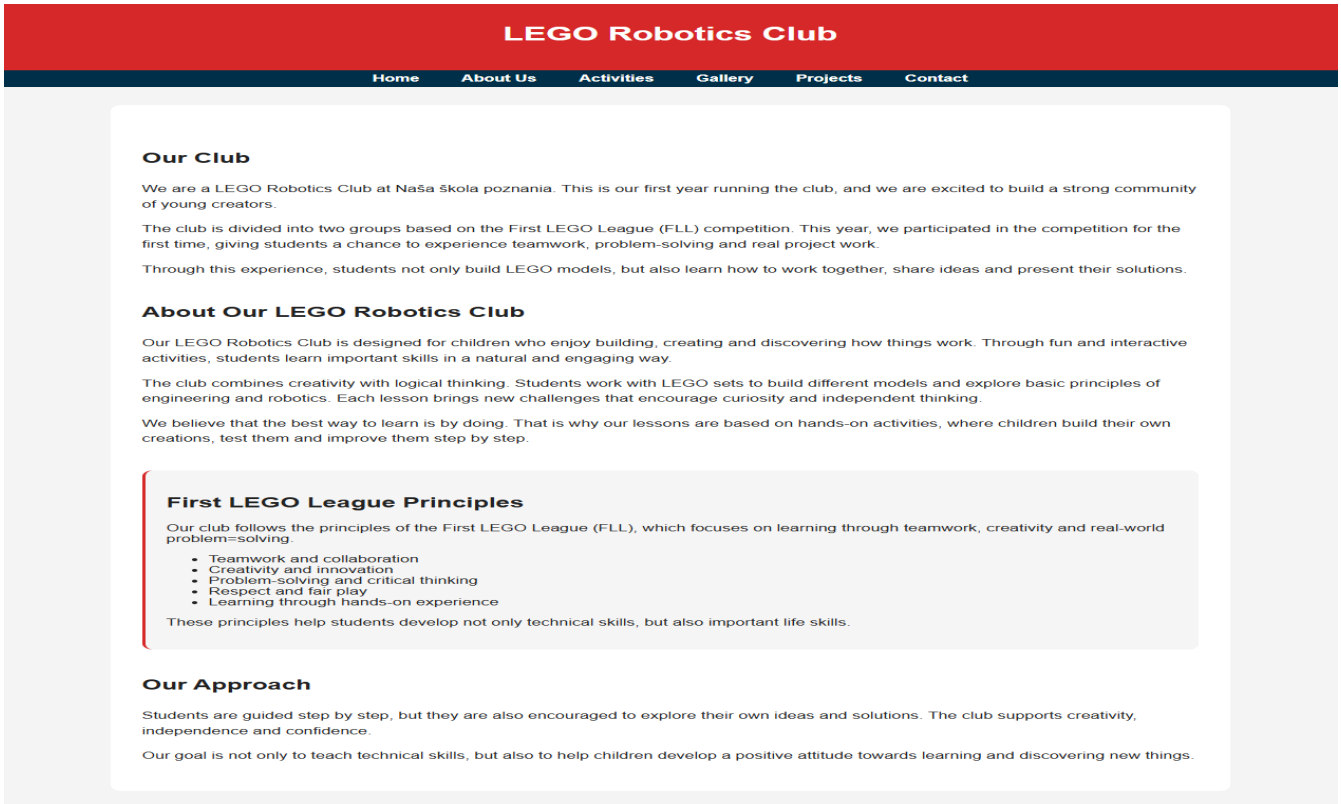
Main features of the website:

- Home page with introduction
- About page with club information
- Activities page describing lessons
- Gallery with image preview
- Projects page using JSON and AJAX
- Contact form with validation

Home page – main introduction and navigation.



About page – information about the club and its principles.



LEGO Robotics Club

Our Club

We are a LEGO Robotics Club at Naša škola poznania. This is our first year running the club, and we are excited to build a strong community of young creators.

The club is divided into two groups based on the First LEGO League (FLL) competition. This year, we participated in the competition for the first time, giving students a chance to experience teamwork, problem-solving and real project work.

Through this experience, students not only build LEGO models, but also learn how to work together, share ideas and present their solutions.

About Our LEGO Robotics Club

Our LEGO Robotics Club is designed for children who enjoy building, creating and discovering how things work. Through fun and interactive activities, students learn important skills in a natural and engaging way.

The club combines creativity with logical thinking. Students work with LEGO sets to build different models and explore basic principles of engineering and robotics. Each lesson brings new challenges that encourage curiosity and independent thinking.

We believe that the best way to learn is by doing. That is why our lessons are based on hands-on activities, where children build their own creations, test them and improve them step by step.

First LEGO League Principles

Our club follows the principles of the First LEGO League (FLL), which focuses on learning through teamwork, creativity and real-world problem=solving.

- Teamwork and collaboration
- Creativity and innovation
- Problem-solving and critical thinking
- Respect and fair play
- Learning through hands-on experience

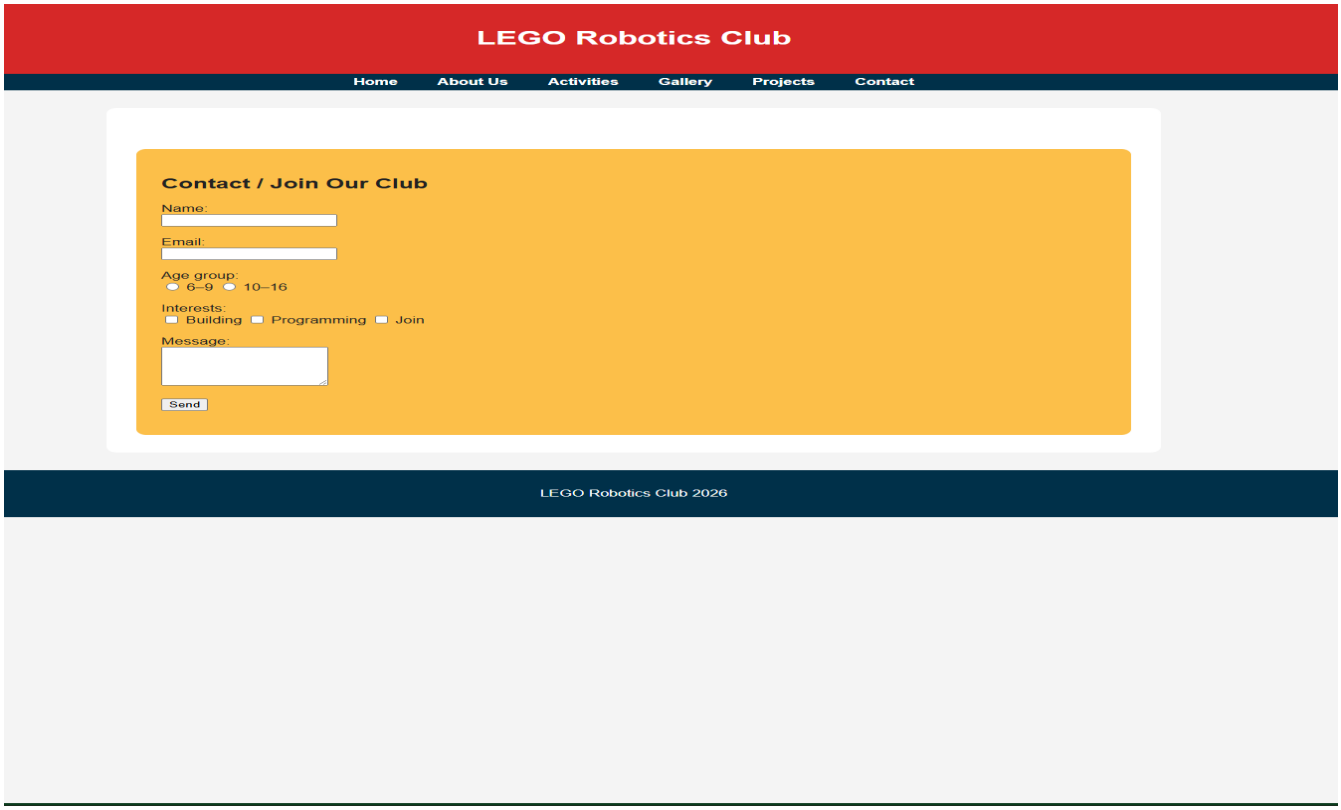
These principles help students develop not only technical skills, but also important life skills.

Our Approach

Students are guided step by step, but they are also encouraged to explore their own ideas and solutions. The club supports creativity, independence and confidence.

Our goal is not only to teach technical skills, but also to help children develop a positive attitude towards learning and discovering new things.

Activities page – description of what students do in the club.



Contact page – form for joining the club.

Activities

Our Activities

In our LEGO Robotics Club, students learn through building, programming and teamwork. Each lesson brings new challenges and creative tasks.

Building

Students start with basic constructions and simple motorized models, gradually moving to working with sensors and more complex builds. Advanced students also explore gear systems and basic principles of mechanics.

Programming

Students start with block-based programming and gradually move to Scratch-like environments. Some advanced students also begin working with programming languages such as Python.

Teamwork

Students learn to work as a team following the First LEGO League (FLL) principles. They collaborate, share ideas and support each other while solving challenges. We focus on respect, fair play and learning together.

Problem-Solving

Problem-solving is an important part of our club and the First LEGO League experience. Students learn to identify challenges, discuss possible solutions, test their ideas and improve their work through trial and error.

Projects

As part of our First LEGO League preparation, students work on projects connected to real-world problems. They research ideas, build models, prepare presentations and learn how

Competition Success

Older Group (10–16 years)

Our older group participated in the First LEGO League regional competition for the first time. They successfully presented their work and received the "Level Up" award for their progress and development.

Younger Group (6–9 years)

Our younger group also took part in the regional competition in Bratislava and successfully advanced to the national finals in Žilina. They received the "Creative Story" award for their project.

How Our Sessions Work

- Introduction to the topic
- Building and experimenting
- Testing and improving models
- Discussion and presentation
